AMS’ MOST POPULAR INFLATABLE PROSTHESIS –
THE AMS 700™ PENILE PROSTHESIS PRODUCT LINE

Available with or without preconnected cylinders and pump for either an infrapubic or penoscrotal approach.
Offering a combination of features focused on both surgeon and patient satisfaction.

EXCELLENT GIRTH EXPANSION ▲ EXCEPTIONAL RIGIDITY ▲ NATURAL APPEARING FLACCIDITY

Conceal™ Low-Profile Reservoir
▲ Parylene coated to enhance reservoir durability
▲ Optimizes fit to offer a sleek, flexible solution

Cylinder and Rear Tip Extender (RTE) Design
▲ Reduced proximal profile designed to ease placement into proximal corpora even in difficult to dilate cases
▲ Snap-Fit™ RTEs optimize fit and provide a secure, rigid connection
▲ Broad range of RTE lengths provide custom fit for patients (available in 0.5 cm increments, ranging from 0.5-7.5 cm)

Momentary Squeeze (MS) Pump
▲ One-touch button designed for easy deflation
▲ Lock-out valve designed to resist auto inflation

InhibiZone™ Antibiotic Treatment
▲ Only antibiotic impregnated inflatable penile prosthesis on the market
▲ Creates a zone of inhibition effective against the bacteria commonly associated with inflatable penile prosthesis infections
▲ Provides a significant reduction in rate of revisions due to infection

IMPORTANT SAFETY INFORMATION

▲ Not for patients with urogenital infections or active skin infections in region of surgery.
▲ InhibiZone treated version of this device is not for patients with known allergy or sensitivity to rifampin (rifampicin), or to minocycline, or other tetracyclines.

▲ Will make latent natural or spontaneous erections, as well as other interventional treatment options impossible. Penile shortening, curvature or scarring may result.
▲ Patients with diabetes, spinal cord injuries, or open sores may have an increased risk of infection associated with a prosthesis.

The AMS 700 Series Inflatable Penile Prosthesis is intended for use in the treatment of chronic, organic, male erectile dysfunction (impotence). These devices are contraindicated in patients who have active urogenital infections or active skin infections in the region of surgery or (for the AMS 700 with InhibiZone) have a known sensitivity or allergy to rifampin, minocycline, or other tetracyclines. Implantation will make latent natural or spontaneous erections, as well as other interventional treatment options, impossible. Men with diabetes, spinal cord injuries or open sores may have an increased risk of infection. Failure to evaluate and treat device erosion may result in infection and loss of tissue. Implantation may result in penile shortening, curvature, or scarring. Possible adverse events include, but are not limited to, urogenital pain (usually associated with healing), urogenital edema, urogenital ecchymosis, urogenital erythema, reservoir encapsulation, patient dissatisfaction, auto-inflation, mechanical malfunction, and impaired urination.

Prior to using these devices, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions and potential adverse events.
